Exam : **PL-600**

Title : Microsoft Power Platform
Solution Architect

Version : DEMO

1. Topic 1, First Up Consulting

Case study

This is a case study. **Case studies are not timed separately. You can use as much exam time as you would like to complete each case.** However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the **Next** button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an **All Information** tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the **Question** button to return to the question.

Background

First Up Consulting recruits information technology (IT) workers for temporary or permanent positions at client companies. The company operates offices in multiple countries/regions.

First Up has both full-time and part-time employees. The company has a team of worker support agents that respond to inquiries from current and prospective workers. Some of the worker support agents are multilingual.

The company does not have a standardized tool used for reporting purposes. The organization engages you to implement a new Power Platform solution. Workers are managed by a dedicated team that includes one primary recruiter and a contract assistant. Many client companies live in areas that do not allow for mobile data connections.

Current environment

Existing systems and processes

- First Up uses an on-premises system to manage current and historical patient data including medications and medical visits.
- The company plans to reference historical data in the existing system. The records held in these systems will not be migrated to the new solution except for medication information.

- Employee authentication with the existing system is provided by an on-premises Active Directory instance that is linked to Azure Active Directory.
- An appointment record is created for each visit with a worker. The record includes worker contact information, preferred language, the date and time of the appointment, and other relevant data. This information is reviewed by the worker's primary recruiter.
- First Up has no current capabilities for forecasting future worker needs based on the data held.

Client company visits

Before First Up signs a contract to place workers at a client company, a member of the audit team visits the company and interviews company management. Audit members use different types of devices including Android and iOS devices. First Up has no plans to require the use of a single type of device. Audit team members currently record information about workers on paper forms. Team members enter information from paper forms into the system when they return to the office.

First Up audits client companies at least once each year but may schedule additional visits based on feedback from workers that they place at a client company.

Requirements

General

- There is no standardized communication tool across the company, and this causes communication issues between different teams.
- First up employees must be able to contact each other by using a secure system to ask and answer questions about medical cases.
- Workers must be able to communicate in near real-time with worker support agents.

Client company visits

- Audit team records must be locked after they have been reviewed by a First Up manager. No further edits to the record can be carried out. This must be implemented using standard available system functionality.
- Audit teams must be able to enter records of their visits to the companies where they have or may place workers. Audit teams must be able to update any necessary records with the latest information.
- The solution must support tracking of security clearance information for a worker including the date, status, and certifying agency.
- When a worker makes an appointment, the appointments must appear in the timeline for the worker's contact record.

Job history information

- The solution must provide a worker appointment booking system that can access worker historical job placement data.
- The solution must allow employees to associate a primary recruiter with each worker. The solution must also allow multiple secondary recruiters to be associated with each worker.
- Every worker assessment performed must be validated and countersigned by the primary recruiter for a worker.
- Job posting data from previous work engagements must be accessible by the Power Platform solution

to ensure that new job postings are accurate.

- First Up staff members must be able to view and update worker records. They must be able to see current and historical job placement data on the same form in the new solution.

Worker access

- The solution must support workers that speak different languages. The solution must provide automatic translation capabilities.
- The solution must support near real-time communications between workers and recruiters.
- Workers must be able to view their records online. Workers must be able to enter any additional information that is required by or may be helpful to recruiters.
- The solution must provide workers a way to search for general information about available positions.
- Workers must be able to request copies of their records by using a chatbot. Workers must be able to provide information to a recruiter as needed.

Data platform

- Audit teams must have the ability to view worker information on their mobile devices.
- Audit teams must be able to record data during visits to locations where workers are placed.
- The solution must support the ability for a corporate governance auditing team to periodically audit the organization's records, policies, and procedures.

Reporting and analytics

- The reporting and analytics team must be able to create reports that include data from all facilities and all workers.
- Management reports must present an overview of the entire organization. Other reports may be limited to specific offices.
- You must create dashboards that show the status across all groups of workers. The dashboards must be embedded into the Power Platform apps. Updates to data must be displayed in near real time.

Security

- Authentication for all user types must be managed by a single platform. IT teams must use PowerShell to apply security permissions for users.
- Worker records must only be viewed by the recruiting office that the worker visits.
- Worker still records must be archived after ten years and are then removed from the main system. Worker information must not be deleted from the system while skill and job placement history records for the worker exist in the system.
- User security roles must be customized to ensure that users are able to interact only with the specific data in which they need access.
- Workers must be able to sign into a portal by using their own email address. Workers must be required to use a secure method of authentication to be able to view their data.
- Alerts regarding the number of recruited and placed at client companies must be updated as background processes.

Issues

The organization reports the following issues:

- Recruiters report that they cannot see historical job placement data for workers.
- API usage reports show that the number of API calls made exceeds limits. This causes delays saving data.
- Users cannot view Power BI reports within the Power Platform apps.
- Some security clearance information for workers not visible from within the Power Platform solution.
- Audit teams report that they cannot view or edit worker data when the device on which they access the solution does not have network connectivity.
- The testing team reports that one of the canvas apps is not working as expected. An error message displays as specific pages load.

1. You need to investigate the canvas app functionality issues.

Which two tools can you use? Each correct answer presents a complete solution. NOTE: Each correct selection is worth one point.

- A. App checker
- B. Errors function
- C. Solution checker
- D. Power Platform admin center

Answer: A,C

Explanation:

Scenario: The testing team reports that one of the canvas apps is not working as expected. An error message displays as specific pages load.

A: The App checker is now available to help provide a clear list of formula issues in your app, and to provide items to fix to make your app accessible. The App checker is an area that the PowerApps team will continue to invest in, and build on in order help to make debugging, performance and best practice decisions an easier and more guided experience.

C: With the solution checker feature, you can perform a rich static analysis check on your solutions against a set of best practice rules and quickly identify these problematic patterns. After the check completes, you receive a detailed report that lists the issues identified, the components and code affected, and links to documentation that describes how to resolve each issue.

Reference: <https://powerapps.microsoft.com/en-us/blog/new-app-checker-helps-you-fix-errors-and-make-accessible-apps/>

2. You need to recommend a solution for handling data entry requirements for the mobile audit teams.

What are two possible ways to achieve the goal? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Canvas app within Power Apps Player
- B. Canvas app within a browser
- C. Dynamics 365 Field Service
- D. Dynamics 365 App for Outlook

Answer: A,B

Explanation:

Scenario:

Audit teams must have the ability to view worker information on their mobile devices. Audit teams must be able to record data during visits to locations where workers are placed.

When you create an app, or someone shares an app with you, you can run that app on the Power Apps mobile app or in a web browser.

Explanation:

Reference: <https://docs.microsoft.com/en-us/powerapps/user/run-app-browser>

3.HOTSPOT

You need to design tables for the solution.

What should you recommend? To answer, select the appropriate options in the answer area. NOTE:

Each correct selection is worth one point.

Data type	Technical solution
------------------	---------------------------

Job placement record

▼
Custom table
Activity table
Virtual table

Security clearance record

▼
Lookup (N:1)
Choice
Lookup (N:N)

Answer:

Data type	Technical solution
------------------	---------------------------

Job placement record

▼
Custom table
Activity table
Virtual table

Security clearance record

▼
Lookup (N:1)
Choice
Lookup (N:N)

Explanation:

Graphical user interface, text, application, chat or text message

Description automatically generated

Box 1: Virtual Table

A virtual table is a custom table in Microsoft Dataverse that has columns containing data from an external data source. Virtual tables appear in your app to users as regular table rows, but contain data that is sourced from an external database, such as an Azure SQL Database. Rows based on virtual tables are available in all clients including custom clients developed using the Dataverse web services.

Scenario:

- ⇒ First Up uses an on-premises system to manage current and historical patient data including medications and medical visits.
- ⇒ The company plans to reference historical data in the existing system. The records held in these systems will not be migrated to the new solution except for medication information.
- ⇒ The solution must provide a worker appointment booking system that can access worker historical job placement data.
- ⇒ First Up staff members must be able to view and update worker records. They must be able to see current and historical job placement data on the same form in the new solution.

Box 2: Lookup (N:1)

Each worker can have many security clearances, so need a 1:N relationship.

Scenario: The solution must support tracking of security clearance information for a worker including the date, status, and certifying agency.

4.DRAG DROP

You need to recommend methods for assigning security to each group of users.

What should you recommend? To answer, drag the appropriate methods to the correct groups of users.

Each method may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. NOTE: Each correct selection is worth one point.

Methods	Group of users	Method
Dataverse Application User		
Power Platform Local Business Owner Team	Full-time employees	Method
Azure Active Directory B2B Guest Access	Automation	Method
Azure Active Directory Security Group Team	Corporate governance auditing team	Method

Answer:

Methods	Group of users	Method
Dataverse Application User		
Power Platform Local Business Owner Team	Full-time employees	Power Platform Local Business Owner Team
Azure Active Directory B2B Guest Access	Automation	Azure Active Directory Security Group Team
Azure Active Directory Security Group Team	Corporate governance auditing team	Azure Active Directory B2B Guest Access

Explanation:

Graphical user interface, application, table

Description automatically generated

Box 1: Power Platform Local Business Owner Team

Owner team: An owner team owns records and has security roles assigned to the team. A user's privileges can come from their individual security roles, those of the teams that they're part of or the ones

they inherit. A team has full access rights on the records that the team owns. Team members are added manually to the owner team.

Scenario: Employee authentication with the existing system is provided by an on-premises Active Directory instance that is linked to Azure Active Directory.

Box 2: Azure Active Directory Security Group Team

An Azure Active Directory (Azure AD) group team. Similar to owner team, an Azure AD group team can own records and can have security roles assigned to the team.

Note: The administration of app and data access for Microsoft Dataverse has been extended to allow administrators to use their organization's Azure Active Directory (Azure AD) groups to manage access rights for licensed Dataverse users.

Box 3: Azure Active Directory B2B Guest Access

An Azure AD B2B collaboration user is an external user, typically from a partner organization, that you invite to sign into your Azure AD organization using their own credentials. This B2B collaboration user (also generally referred to as a guest user) can then access the apps and resources you want to share with them. A user object is created for the B2B collaboration user in the same directory as your employees. B2B collaboration user objects have limited privileges in your directory by default, and they can be managed like employees, added to groups, and so on.

Scenario: Before First Up signs a contract to place workers at a client company, a member of the audit team visits the company and interviews company management. Audit members use different types of devices including Android and iOS devices. First Up has no plans to require the use of a single type of device.

5.HOTSPOT

You need to recommend methods to resolve the organization's issues.

What should you recommend? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Issue

Resolution method

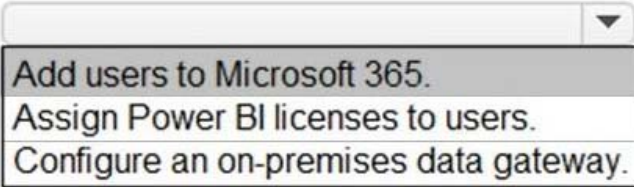

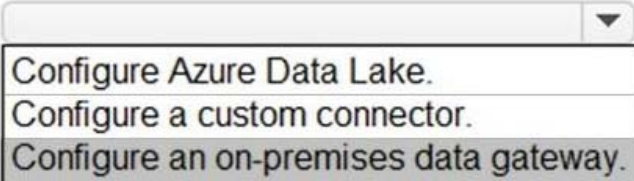

Users cannot see Power BI reports.

	▼
Add users to Microsoft 365.	
Assign Power BI licenses to users.	
Configure an on-premises data gateway.	

Historical data does not appear in reports.

	▼
Configure Azure Data Lake.	
Configure a custom connector.	
Configure an on-premises data gateway.	

Answer:

Issue	Resolution method
Users cannot see Power BI reports.	
Historical data does not appear in reports.	

Explanation:

Graphical user interface, text, application, chat or text message

Description automatically generated

Box 1: Add users to Microsoft 365.

Scenario: Users cannot view Power BI reports within the Power Platform apps.

Issue: The people you share with may see a locked tile in a dashboard, or a "Permission required" message when they try to view a report.

Solution: You need to grant them permission to the underlying dataset.

- ☞ Go to the All or the Datasets + dataflows tab in your content list.
- ☞ Select More options (...) next to a dataset, then select Manage permissions.
- ☞ Select Add user.
- ☞ Enter the full email addresses for individuals, distribution groups, or security groups.
- ☞ Select Grant access.

Box 2: Configure an on-premises data gateway.

Scenario: The company plans to reference historical data in the [on-premises] existing system. The records held in these systems will not be migrated to the new solution except for medication information. The on-premises data gateway acts as a bridge to provide quick and secure data transfer between on-premises data (data that isn't in the cloud) and several Microsoft cloud services. These cloud services include Power BI, PowerApps, Power Automate, Azure Analysis Services, and Azure Logic Apps. By using a gateway, organizations can keep databases and other data sources on their on-premises networks, yet securely use that on-premises data in cloud services.
